Gina Stevens

Data Security Breaches Rita Tehan, 2008 Personal data security breaches are being reported with increasing regularity. Within the past few years, numerous examples of data such as Social Security, bank account, credit card, and driver's license numbers, as well as medical and student records have been compromised. A major reason for the increased awareness of these security breaches is a California law that requires notice of security breaches to the affected individuals. This law, implemented in July 2003, was the first of its kind in the nation. State data security breach notification laws require companies and other entities that have lost data to notify affected consumers. As of January 2007, 35 states have enacted legislation requiring companies or state agencies to disclose security breaches involving personal information. Congress is considering legislation to address personal data security breaches, following a series of high-profile data security breaches at major financial services firms, data brokers (including ChoicePoint and LexisNexis), and universities. In the past three years, multiple measures have been introduced, but to date, none have been enacted.

Information Security and Data Breach Notification Safeguards, 2007 Information security and breach notification requirements are imposed on some entities that own, possess, or license sensitive personal information. Information security standards are designed to protect personally identifiable information from compromise, unauthorized disclosure, unauthorized acquisition, unauthorized access, or other situations where unauthorized persons have access or potential access to personally identifiable information for unauthorized purposes. Data breach notification requirements obligate covered entities to provide notice to affected persons (e.g., cardholders, customers) about the occurrence of a data security breach involving personally identifiable information. The first data breach notification law was enacted in 2002-- S.B. 1386, the California Security Breach Notification Act. It requires any state agency, person, or business that owns or licenses computerized personal information to disclose any breach of a resident's personal information. S.B. 1386 was the model for subsequent data breach notification laws enacted by many states and Congress. California's law and other similar federal and state laws require the disclosure of security breaches of personal information. Major data security breaches have been disclosed by the nation's largest information brokerage firms, retailers, companies, universities, and government agencies. From February 2005 to December 2006, 100 million personal records were reportedly lost or exposed. Massive data security breaches in 2005, 2006, and 2007 have heightened interest in the security of personal information; in the business and

regulation of data brokers; in the liability of retailers, credit card issuers, payment processors, banks, and furnishers of credit reports for third party companies costs arising from data breaches; and in remedies available to individuals whose personal information was accessed without authorization.

Federal Information Security and Data Breach Notification Laws Gina Marie Stevens,2008-10 When polluted air mixes with rain, snow, and fog, acid precipitation forms. This acidity has caused people to worry about the environment. Another concern is its effect on historic buildings and monuments. This booklet focuses on acid rain and its impact on our Nation's capital. In 1997, rain in Washington, D.C., had an average acidity of 4.2, about as acid as a carbonated drink and more than 10 times as acid as clean, unpolluted rain. This booklet defines acid rain, explains what effects it has on marble and limestone buildings, and shows, on a walking tour, some of the places in our Nation's capital where you can see the impact of acid precipitation. Includes a Glossary of Geologic and Architectural Terms and a map. Color photos.

Data Breach Notification Laws: High-impact Strategies - What You Need to Know Kevin Roebuck,2011 Security breach notification laws have been enacted in most U.S. states since 2002. These laws were enacted in response to an escalating number of breaches of consumer databases containing personally identifiable information. The first such law, the

California data security breach notification law, Cal. Civ. Code 1798.82 and 1798.29, was enacted in 2002 and became effective on July 1, 2003. As related in the bill statement, law requires a state agency, or a person or business that conducts business in California, that owns or licenses computerized data that includes personal information, as defined, to disclose in specified ways, any breach of the security of the data, as defined, to any resident of California whose unencrypted personal information was, or is reasonably believed to have been, acquired by an unauthorized person. In addition the law permits delayed notification if a law enforcement agency determines that it would impede a criminal investigation. The law also requires any entity that licenses such information to notify the owner or licensee of the information of any breach in the security of the data. In general, most state laws follow the basic tenets of California's original law: Companies must immediately disclose a data breach to customers, usually in writing. The European Union implemented a breach notification law in the Directive on Privacy and Electronic Communications (E-Privacy Directive) in 2009. This directive has to implemented by national law until 25 May 2011. This book is your ultimate resource for Data Breach Notification Laws. Here you will find the most up-to-date information, analysis, background and everything you need to know. Data Security Breaches Patricia Diaz, William C. Long, 2012-12 A data security breach occurs when there is a loss or theft of, or other unauthorized access to, sensitive personally identifiable information that could result in the potential compromise of the confidentiality or integrity of data. This book provides an overview of state security breach notification laws applicable to entities that collect, maintain, own, possess, or license personal information.

Consumer Attitudes Toward Data Breach Notifications and Loss of Personal Information Lillian Ablon, Paul Heaton, Diana Catherine Lavery, Sasha Romanosky, 2016-04-14 Although spending on cybersecurity continues to grow, companies, government agencies, and nonprofit organizations are still being breached, and sensitive personal, financial, and health information is still being compromised. This report sets out the results of a study of consumer attitudes toward data breaches, notifications that a breach has occurred, and company responses to such events.

Breached! Daniel J. Solove, Woodrow Hartzog, 2022 Web-based connections permeate our lives - and so do data breaches. Given that we must be online for basic communication, finance, healthcare, and more, it is remarkable how many problems there are with cybersecurity. Despite the passage of many data security laws, data breaches are increasing at a record pace. In *Breached!*, Daniel Solove and Woodrow Hartzog, two of the world's leading experts on cybersecurity and privacy issues, argue that the law fails because, ironically, it focuses too much on the breach itself. Drawing insights from many fascinating stories about data breaches, Solove and Hartzog show how major breaches could have been prevented through inexpensive, non-cumbersome means. They also reveal why the current law is counterproductive. It punishes organizations that have suffered a breach, but doesn't recognize other contributors to the breach. These outside actors include software companies that create vulnerable software, device companies that make insecure devices, government policymakers who write regulations that increase security risks, organizations that train people to engage in risky behaviors, and more. The law's also ignores the role that good privacy practices can play. Although humans are the weakest link for data security, the law remains oblivious to the fact that policies and technologies are often designed with a poor understanding of human behavior. *Breached!* corrects this course by focusing on the human side of security. This book sets out a holistic vision for data security law - one that holds all actors accountable, understands security broadly and in relationship to privacy, looks to prevention rather than reaction, and is designed with people in mind. The book closes with a roadmap for how we can reboot law and policy surrounding cybersecurity so that breaches become much rarer events.

Data Security Breach Notification Laws Gina Stevens, 2012-06-20 A data security breach (DSB) occurs when there is a loss or theft of, or other unauthorized access to, sensitive personally identifiable info. that could result in the potential compromise of the confidentiality or integrity of data. Various states have laws requiring notification of DSB involving

personal info. Fed. statutes, regulations, and a memorandum for fed. departments and agencies require certain sectors (healthcare, financial, federal public sector, and the VA) to implement info. security programs and provide notification of DSB of personal info. This report provides an overview of state DSB notification laws applicable to entities that collect, maintain, own, possess, or license personal info. This is a print on demand report.

How to Survive a Data Breach Stewart Mitchell, 2009 Data breaches are, for most organisations, a crushing blow to their customers and staffs confidence in them, to their reputation and brand value, and to the career prospects of senior executives. A data breach may be an even bigger calamity to the individuals whose data has been exposed to Internet criminals, to the press and, possibly, to malicious and ill-wishing acquaintances. Identity theft is a growing problem, and one which is inadequately policed. Individuals whose personal and/or financial data has been breached can find that their credit

histories are compromised, and may have to spend years and substantial sums clearing their names. Provides essential support - putting measures in place Those organisations that have a tried and tested procedure in place for dealing with data breaches will not only put themselves in a position to obey the current and emerging data breach legislation but, more importantly, will enable themse

U.S. Data Breach Notification Law John P. Hutchins, Anne P. Caiola, 2007 In 2005, 20 different states and the City of New York followed California's lead and passed laws seeking to require entities collecting or storing personally identifiable information to notify the subjects of the information if that information allows unauthorized third parties access to that information. There are now 21 different state laws on the subject, many with very different requirements. Federal legislation is hoped for, but passage of broadly preemptive federal legislation is far from certain. This book provides comprehensive guidance to all 21 state (and one local) legislative efforts at breach notification statutes, categorizes the various aspects of such statutes and specifically describes how each different state deals with each aspect. It points out the similarities and differences of each state law. The approach is simply a detailed summary of each different legislative scheme.
